Subject: Do not let the latest settlement stand.

How does this punish Microsoft? This settlement further strengthens Microsoft's monopoly on the computing industry, unless the computers and software Microsoft has to provide to these educational institutions provide competing products and not Microsoft Windows or their other software this is a reward for Microsoft. The monetary amount means little to Microsoft as it can easily afford it. Remember Microsoft as been found GUILTY and should be punished to decrease their market share and break their monopoly, not increase it. I'm sorry, but I feel Judge Penfield Jackson's break up ruling was the correct one and his ruling should not have been dismissed regardless of his out of court comments.

I know my comments will mean very little if any at all, but I'm a concerned citizen and believe in fair competition in this country. Microsoft Windows should not be the only operating system on computers, PC's workstations or servers, people or companies should be given a choice when purchasing one. This also includes office software, browsers, games, internet, etc.

Sincerely: Richard Williams
